Our values

Design

At Luxiona, design is at the heart of our identity. With products conceived in Barcelona and developed in Poland, we combine European creativity and engineering excellence. Our portfolio covers a complete range of functional lighting solutions that are practical, easy to integrate, and simple to maintain—always with a focus on human comfort, both physiological and psychological.

Customisation

We create lighting that adapts to every project. From unique solutions that differentiate spaces to flexible development supported by our European factory, we provide tailored consultancy and agile response. This ensures solutions that address specific functional needs while meeting project requirements in the shortest possible time.

Competitiveness

Our competitiveness lies in delivering value without compromise. We combine proximity and service with high technical performance at an optimal price point. With more than a century of expertise and state-of-the-art innovation, we develop energy-efficient and sustainable solutions designed to perform today and endure tomorrow.

DESIGN PLUS

Luxiona Main Factory, Jacentow. Poland

Competitive manufacturing

By combining design in Barcelona with production in Europe, Luxiona provides customers with competitive, flexible, and timely solutions.

A certified production plant for clean and medical luminaires, and a logistics centre located in Poland allows us to be independent and offer fast turnaround times, as well as better communication and advice. Our infrastructure and technical equipment are constantly updated to offer continuous improvement of production. With our on-site

certified clean room, we are one of the few manufacturers in Europe in full control of the production process, while maintaining the necessary standards to certify our luminaires for installations requiring a high degree of cleanliness atmosphere, including ISO 14644-1 certification for clean rooms. As a result, our product range covers different sectors: architectural, office, industrial, sports, retail, clean rooms, medical and hospital facilities, as well as the pharmaceutical, chemical, food, and electronics industries.

Lighting Consulting

Our team of 50+ experts is always available in each country of our presence and will accompany you in developing your lighting projects. We provide personalised advice, specific for retail lighting, based on experience and know-how gathered throughout the years. Thanks to the complete follow-up of the project's needs until its implementation we offer you a global and integral vision at every stage. Our certified Dialux trainer, with always up-to-date knowledge is available for you to help you with your project and to train your design team. A personal approach to every project is at the centre of our work and leads to a partnership that results in top-quality projects.

Customer and project requirements

Stage 1: Plan with proposed distribution of luminaires.
Detailed plans with sections, cuts, ceiling typology, and furniture.
Functions, branding, ambience, experience, sensations, levels, and creation of environments.
BIM methodology.

Lighting consulting, conceptualisation and project development Analysis and review of plans and needs

Stage 2: Initial sketch of the lighting study.
Plans with proposed location of luminaires.
Lighting study and calculation (3D modelling).
Carrying out lighting calculations to adjust and validate the proposal and the lighting levels, sensations, consumption control, and efficiency.
Development of special projects and products.

Presentation and delivery of the project

Stage 3: Lighting levels represented in false colours.
Luminaire location plan (PDF and CAD).
Technical data sheets of the applied products.
Control and Smart Lighting services: Creation of groups and scenes, location of sensors, sketches and electrical diagrams, configuration, etc.

Technical support and customer service

Stage 4: Lighting simulation result of the final project.
Follow-up of work and supervision of the installation and configurations.
Incident management.
Maintenance and repairs.
Programming and commissioning of regulation and control systems.

Sustainable solutions

Sustainability is at the very core of responsible businesses. By working together we strive to develop projects that have a positive impact on the environment and promote sustainable lighting so important for modern facilities in the retail facilities, where efficiency and energy-saving are one of the most crucial factors. We are able to achieve this by using intelligent switching control systems and by providing users with efficient, and sustainable solutions.

One of them are LED sources used in Luxiona luminaires, characterised by a long lifespan of 100,000 h and the LxBy parameter at the L80B10 level. This means that after 100,000 hours of use, the LED sources will retain 80% of their initial luminous flux, and only 10% of the LEDs will have less than 80% of their initial luminous flux. This means that we can enjoy their quality longer.

Innovative technology

Innovations and functionality have always been and will remain an important factors in the development of new lighting solutions, services, and the application of new technologies. The know-how accumulated after almost half a century of experience and the combination of design and engineering allows us to stay one step ahead.

Together with our R+D+i department, in constant search for new lighting solutions, we are able to use the latest generation of materials and production processes. Our experience allows us to shape the lighting of the future and expand our innovative product portfolio.

Certification programmes for green buildings

Lumbo

Customise and go beyond the standards

We leave nothing to chance. By listening, understanding, and combining our knowledge and experience we make the most of available possibilities. By anticipating even the most demanding needs of investors, architects, and designers, we are able to create perfect lighting conditions for every space and task performed in the retail sector.

The wide range of customisable solutions has a number of applications specifically developed by our experts to meet all the needs of customers, staff, investors, or the management of retail facilities.

Light

Colour temperature

The colour temperature used in Luxiona luminaires highlights the product to be displayed and enhances the natural colours of the product, using from warm 2700K to cool 3000K or 4000K.

Colour rendering

Excellent reproduction of natural colours in the most natural way, thanks to our advanced LED sources, possible with high CRI values.

Lumen

The amount of visual light emitted is crucial in shops as it allows to distinguish between walk-through areas and areas where you want to draw attention to the products on display so that the shadows are natural.

Diffuser

Thanks to our extensive diffuser solutions, you can emphasise the shape and quality of your products with the right combination of direct and diffused light.

Optic

Our luminaires can be equipped with closed optics to draw attention to displays or mannequins or open and diffuse optics for general orientation lighting.

Emission

Optimising light output to achieve best performance comfort and wellness. Direct, indirect and Up&Down.

Gear

Control

On/off, dim light on request.

Endurance

Adapt lifespan to project needs even in hard conditions.

Emergency

Safety by lighting even when there is no electrical supply.

Sensors

Interaction in realtime between lighting and application environment.

Body

Size

Dimension adjusted to specific project.

Material

Sheet steel, stainless steel
Protection: IP, IK.

Finishing

The finishes of Luxiona luminaires are adapted as much as necessary to the projects of commercial areas, especially using the colours that best accompany the interior design and the corporate colours of the brand, even being able to mark the brand logo on the luminaire to reinforce the corporate message.

Installation

Surface, recessed, suspended- it is also possible to adapt the design of the luminaires to various types of suspended ceilings used on the market, including ceilings with different module sizes.

Tunable White

More and more scientific studies confirm the effects of light on the predisposition to buy. The intensity of light and its spectrum also play a very important role in physical and mental emotions. To ensure the right light intensity and colour temperature of artificial light, and also to align it with natural light at a given time

of day, Tunable White is a perfect solution. This technology is available for our retail solutions preventing the lighting colours from appearing natural in addition to the natural contribution, especially on cloudy days to reconstruct an exciting bright indoor ambience.

Luxcan R
Luxcan C

Exceeding lighting standards

Adjust the luminaire's luminous flux to achieve the ideal light intensity and uniformity. Select the luminaire with the appropriate light distribution to easily meet the required lighting standards.

Using highly directed light with a narrow beam width and positioning it close to the products to be highlighted helps to showcase small objects by precisely presenting shapes, colours, and textures in the most natural way. Evoking sensations, highlighting the properties of the products, makes them more appealing, conveys naturalness,

and in the case of food, accentuates its freshness and predisposes visitors to buy it. The different lighting patterns help to orient visitors with a hierarchical highlighting of the different spaces and the areas that require greater visual attention, especially by separating passages and product display areas.

more than 120°

Colour rendering index (CRI)

In shops and retail outlets, attention to the CRI parameter is more than a necessity. For example, in fashion shops, in addition to a good overall CRI parameter, a LED source that reproduces white colours particularly faithfully is essential, as the appearance in and out of the shop between various clothing items is very different when sunlight comes into play. The use of LED sources that additionally emit violet tones allows the brightness of the whites to be different, making it possible to differentiate between them:

Pearl White
Crisp White
Premium White
Vivid White

At the other extreme, in supermarket applications the diversity of colours of meat, fish, fruit and vegetable products makes it more necessary than ever to use the right luminaire to emphasise the original colour of the product:

In gondole aisles we will use luminaires with a high and homogeneous CRI value to faithfully reproduce the diversity of colours of all the products on display.

LED sources with added phosphor to saturate the yellows: bakeries (R10)

Specific LED sources for red meat and marbled meats (R9)

LED sources with excellent CRI in the blue and white bands, (R12 and R13); brightness enhancers for fish

Luxcan Pro

A variety of options

It is possible to personalise the light pattern by choosing between the different new Luxcan diffusers and optical systems. Optics systems based on lenses – guarantee many different light distributions.

Luxcan Lens G

The main characteristic is that beam rays cross in front of the lens. This allows to introduce the lens in a small diameter hole without losing light, becoming a real dark light. With this lens, a very defined spot has a very good cutoff, without residual light for emphasizing objects.

Luxcan Lens T

This lens has a very good mixing, and it's very useful for TW applications and RGB. The beam is very uniform, without double spots.

Luxcan Lens D

Special treatment inside to avoid reflection, so it has a low glare.

Luxcan Lens M

A reflector with a small lens in the middle is for those applications where the lens shouldn't be the protagonist and a traditional reflector is preferred for maintaining the lens beam performance. The beam is homogeneous, without double shade as in the case of normal reflectors.

Customised gear

Smart lighting opens up a new range of possibilities. It enhances comfort and introduces flexibility enabling significant energy savings. By tuning the tone and brightness of light at different times of day it's easier to keep everyone focused and alert, especially during long hours while carrying out different tasks such as displaying the goods on the shelves, managing the products supplies, and assisting the customers. Other times it allows to dim or turn off the lighting in the parts of the building with less traffic. The luminaires can be also equipped with an emergency module that provides the luminaire with the possibility of emergency operation.

Casambi

Casambi is a smart lighting system, that allows a mobile device to communicate directly with a luminaire and luminaires to communicate with each other. It uses a low-power radio communication technology that's built into every modern smartphone, laptop, and tablet. Which makes them ideal tools for controlling lighting, colour, or setting up scenes. It helps bring flexibility and personalisation to designs. By using sensors built into fittings it's also possible to respond to different circumstances and share the data in the cloud.

DALI

DALI is a protocol that enables efficient communication. It works between individual luminaires or groups of luminaires and a control system. It integrates and communicates with other system components such as motion detectors and light sensors, allowing for quick and easy reconfiguration. By use of intelligent LED lighting control, it's possible to save costs associated with lighting, by reducing light intensity in certain working areas which are not currently used or have sufficient daylight.

CASAMBI

 Bluetooth™

CLO ready

Flexibility

Using track lines to further position Luxiona luminaires in shops is the best way to provide extremely high levels of flexibility in a highly change demanding environments such as retail and display areas for fashion, home furnishings, jewellery, and accessories.

This flexibility is important in two ways:

Changes in the layout of the sales display, which require the lighting to follow. In this case it is only necessary to move the luminaires along the rails, adjusting them in the most convenient way to the new display points, without the need to redo the electrical installation in most cases. Changes in the type of product to be displayed, which require luminaires

with different parameters or with different optics, where replacing the lighting is reduced to a "plug & play", removing some luminaires and replacing them with new ones in the same place, without the need for extra wiring.

It is also an advantage, in modular ceilings, to be able to change the general lighting, showing new passageways or new corridors, simply by changing some parts of our Mosaic series for those that are needed now.

Colours speak louder than words

With a variety of colours available in our offer designers gain real freedom in bringing to life their perfect projects.

The possibility of painting some of our luminaires according to the RAL palette is another step toward limitless creativity. While the white luminaire can be easily integrated with the ceiling or walls, sometimes it's necessary to create a visual diversity between them. The vivid colour of a luminaire can become an eye-catching highlight or an integral part of any space.

Customisable dimentions

The products from our offer can be personalised in terms of length, width, or diameter, giving you limitless possibilities and allowing you to match the product perfectly to the space.

Customisable Brand image

Putting the Brand on top of everything is a must to construct a seductive image, that convinces customers and new visitors to get their new purchasing experience. Big brands dress their employees in standard uniforms or put the logo on cashiers to reinforce the shopping experience. Luxiona luminaires follow this trend by the possibility of customizing luminaires with logos, icons, or special colours.

YOUR BRAND

Artshape Line

Pharmacy Colldeforn, Mataró. Spain

Light that sells

Light plays an important role in designing the store.

It is not enough just to have a brand that has the capacity to create a shopping experience. In a world driven by sensations and an excess of media impact, shops increasingly need to be places where the brand not only displays its power but also spaces where differentiating experiences are generated. Experiences are in line with the image that the brand wants to transmit. All the elements that form part of the interior design are part

of this experiential atmosphere, in which lighting plays a crucial role, since vision – together with the sense of hearing – is one of the most effective levers to use when you want to develop different scenarios in the same space, so that visitors feel identified with the values that make the brand unique. Not only with hearing or smell, but above all with vision.

General Lighting

Luxiona luminaires help to guide people through spaces and direct them to what they are looking for.

Luminaires with a marked architectural character, connect the values that the brand transmits with what the buyer already knows.

Personalised lighting, identifies the establishment with a brand and values that transmit security at the time of the purchase decision.

Accent Lighting

To highlight the products on display, our luminaires – together with the entire interior design – excite potential buyers by helping them to discover shapes, textures, and colours and predispose them to the shopping experience.

General lighting

Luxiona luminaires help to guide people through spaces and direct them to what they are looking for.

Through general lighting we can identify the different areas of a shop, with a special focus on the aisles and passageways that mark the flow of visitors in the shops and provide spatial orientation to potential buyers. As these are spaces that in many cases visitors are just getting to know for the first time, it is very important that the general lighting uniformly provides visual information about the depth of the shop, the location of ceilings, and changes in floor level.

High CRI values help to achieve this. It should not be forgotten that this is the area where shop workers spend most of their time and therefore the technical quality of the LED lighting sources must be exquisite, avoiding the emission of infrared or ultraviolet and other bands of the spectrum that are not visible and in some cases harmful to the human body when certain exposure limits are exceeded.

GranVia Pro N

Advanced energy-efficient linear module for the GranVia trunking system, delivering up to 194 lm/W. Long-lasting LED sources with a lifetime of 100,000 h L80/B10 and quick, tool-less installation ensure the best performance.

GranVia N

Energy-efficient linear module for the GranVia trunking system, delivering up to 191 lm/W. Designed for quick, tool-less installation to maximise performance with minimal energy use.

X-Line Pro

A new, versatile product from the X-Line family, with a maximally simplified structure, without mounting plates or LED plates, distinguished by aluminium louvers with efficient LED sources.

X-Line Slight

New luminaire with a classic and elegant line. An aluminium profile with a minimised width up to 34mm wide, and a diffuser recessed into the body and aesthetically flushed with the equipment.

X-Line Slim

Minimalism, effectiveness, and versatility are perfectly balanced. Modern linear luminaire with maximum control of luminance. It adjusts to architectural space and gives freedom for design by creating unique long lines of light.

Artshape Line

A straightforward way to beautify architectural projects. A luminaire with a geometrical design that allows creating of comfortable atmospheres offering harmony, symmetry, and connection among spaces.

Artshape Round

Architectural luminaire in round design that allows flexible use, enhances the feeling of a bigger space, and gives it a modern and welcoming feeling. Available in Full and Edge versions.

Artshape Sq

A timeless design that provides creative lighting with the use of a square shape. With the possibility of painting according to RAL palette, it takes on diverse tasks in various spaces.

Artshape Three

Best way to evade boredom. Luminaire combines modern design and functionality with creating a variety of unconventional accents. Available in Full and Edge versions.

N New product

GranVia Pro N

Advanced energy-efficient linear module for the GranVia trunking system, delivering up to 194 lm/W. Long-lasting LED sources with a lifetime of 100,000 h L80/B10 and quick, tool-less installation ensure the best performance.

GranVia N

Energy-efficient linear module for the GranVia trunking system, delivering up to 191 lm/W. Designed for quick, tool-less installation to maximise performance with minimal energy use.

X-Line Pro

A new, versatile product from the X-Line family, with a maximally simplified structure, without mounting plates or LED plates, distinguished by aluminium louvers with efficient LED sources.

X-Line Slight

New luminaire with a classic and elegant line. An aluminium profile with a minimised width up to 34mm wide, and a diffuser recessed into the body and aesthetically flushed with the equipment.

X-Line Slim

Minimalism, effectiveness, and versatility are perfectly balanced. Modern linear luminaire with maximum control of luminance. It adjusts to architectural space and gives freedom for design by creating unique long lines of light.

Parallel

An efficient modular system excellent for functional lighting of supermarkets and commercial spaces. A luminaire intended for installation in straight lines, made of aluminium, painted in white.

Universal Line

Universal solution for performing versatile tasks thanks to highly efficient LED and different optical systems. Luminaire installed on a ceiling or suspended. Available with fast modular connection systems.

Beryl Gen2 Deco N

The recessed downlight series offers an optimal balance of performance and investment, delivering up to 140 lm/W efficiency with CRI90. It ensures comfortable general lighting, maintaining top performance for over 50,000 hours.

Beryl New K

A perfect union between minimalism, elegance, and simple shape. The luminaire has the ability to adjust the optics in two planes (in the vertical axis by 359° and to the left and right by 15°).

T-Tris Line

Adjustable, versatile, and energy-efficient lighting is perfect for displaying the products and drawing clients' attention. The system with a flexible, fast, and easy installation based on the standard three-phase track rail allowing lighting of specific areas while making products stand out.

Europanel

Inconspicuous yet effective. Luminaire with highly efficient LED sources for a wide range of applications. A perfect tool for designers that easily blends with its architectural surroundings.

Accent lighting

In order to highlight the products on display, our luminaires – together with the entire interior design – excite potential buyers by helping them to discover the product and predispose them to the shopping experience.

The first role played by our retail luminaires is to establish visual hierarchies in the shop by means of lighting contrasts. They highlight points in the shop or convey a message to the visitor that the product is special.

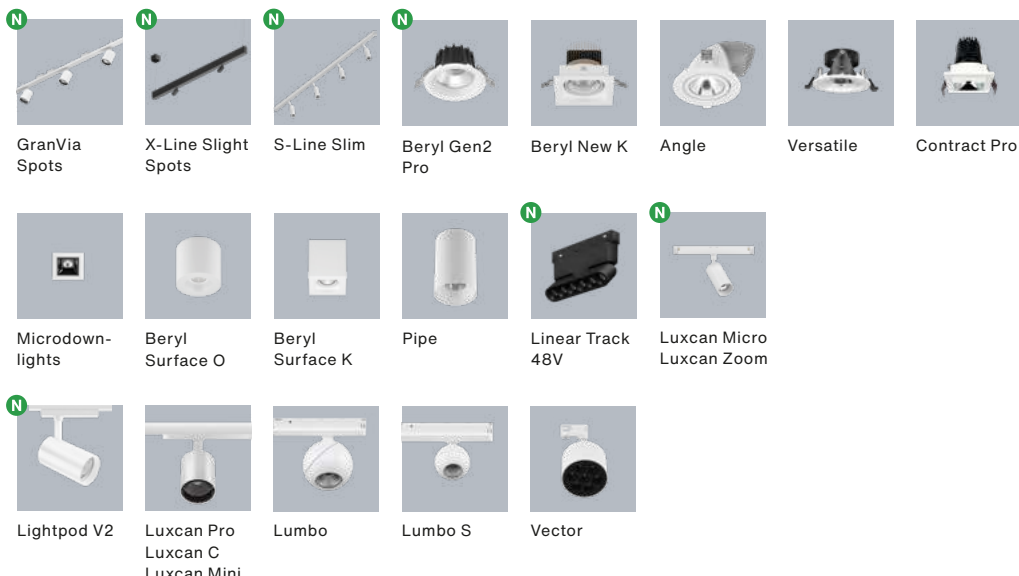

Whether in shop windows, interior podiums, or at the head of gondolas, accent lighting, the closer to the

product the better for small products, reveals to visitors the reality of colours, shapes, and textures, thus emphasising its best features. Wall washers, as another type of accent lighting, are closely aligned with the general lighting, as they delimit where and how the space ends and mark the visual baseline for visitors.
